User Story – Applet List

- **App: Sytorio Switchboard**

- **Steps To Demo:**

- Launch the app
- Observe that Login screen is opened
- Type user name as “ashish.nangla” and password as “welcome1”
- Tap on “Log In” button
- Observe that list of applets is presented.
- Tap on any of the applet state types given at top.
- Observe that applet list is filtered as per applet state selected.

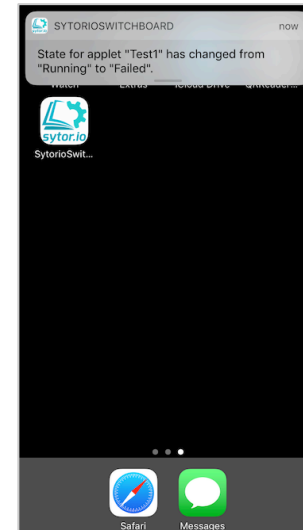

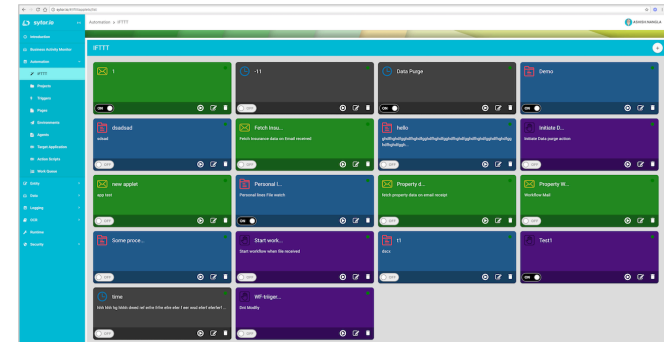

- **Highlights:**

- Animation given to applet counts at top (running, not running and failed)
- Filtering of applets on tapping on applet count.

User Story – Applet State Change Notification

- **App: Sytorio Switchboard**
- **Prerequisites:**
 - Make sure that Sytorio Switchboard app has permission to show notifications. This can be checked in iOS settings app. If you are using app for the first time, the app itself will ask for permission.
- **Steps To Demo:**
 - Launch the app
 - Observe that Login screen is opened
 - Type user name as “ashish.nangla” and password as “welcome1”
 - Tap on “Log In” button
 - Observe that list of applets is presented.
 - Tap on device Home button to minimise the application.
 - Launch the web app on desktop browser <http://sytor.io/#/iftttapplets/list>, use same credentials as iOS app.
 - Change the state of any of the applet, e.g. Not running to Running.
 - Observe that the notification (as shown in screenshot) is displayed on iOS device. (This may take 15-20 seconds as the notification currently works on pull technology and not push.)
- **Highlights:**
 - Notification on applet state change.

Tips and Tricks

- If there is no internet during demo, you can tap on the “View Demo” button on login screen to give demo offline.
